

Farrat

Shock & vibration isolation
for Plant, Machines,
Structure and Buildings

Since 1959 **Farrat Isolevel Ltd** has amassed a wealth of experience in all aspects of vibration, noise and shock isolation in both industrial and civil applications. Projects like this demonstrate our abilities as an engineering and manufacturing company. Farrat can advise on or develop bespoke vibration isolation and precision levelling solutions.

Please contact us for more detailed information and literature or technical advice on how best to overcome noise and vibration problems. Otherwise visit our website www.farrat.com.

Installation of hydraulic actuator test rig on Farrat FSL Spring Isolators

UK – 2000

When planning the installation of sensitive and costly test equipment such as this hydraulic actuator test rig for diesel engine components, careful consideration of the vibration isolation requirements is necessary.

In this case the installation project team approached Farrat who designed and fabricated a system which incorporated a concrete filled steel **Inertia Base** isolated with tuned, low frequency **Farrat FSL Spring Isolators**.

The system proved itself to be easy to install and once in operation provided a very high level of performance
